

My level takes place in the Watch Dogs Universe inside Forgiveness General Hospital, a hospital funded by Blume. Blume has developed a breakthrough in technology: an artificial heart. After some testing, they are ready to put the heart on the market. What the public isn't aware of is the tracking information Blume collects of those who have the heart. As a publicity stunt, Blume's CTO is having his heart replaced with one of Blume's artificial hearts, although he does not have the special tracking components forced on the masses. The player's job is to infiltrate the hospital and replace the special heart with one of the mass', then hack the heart once it is installed. The "bad" hearts are on the second floor, in the Emergent technologies section of the hospital. They will then have to sneak down and replace the heart for the CTO in the organ storage with the "bad" heart. Then the player must watch the operation take place and hack the heart once the surgeons activate it. The surgeons will spot the abnormal activity, but feel it's too risky to reverse the surgery, but they sound the alarm, changing all of the enemy's movement paths. The player then can escape through the morgue by blending in with the bodies. If the player was aggressive, they will have to force the surgeons to perform the surgery at gunpoint, and once the surgery is complete the morgue option is not available, they will have to steal an ambulance make car chase escape.
